

What voltages can Trina Solar modules operate at?

Trina Solar modules are certified for operating in Application Class A installations at voltages below 1000V DC(For TSM-PE05A.**,PE14A.**,below 1500V DC).

Can Trina Solar modules be installed in landscape or portrait orientation?

SITE SELECTION Trina Solar Modules can be mounted in landscape or portrait orientation however the impact of dirt shading the solar cells can be minimized by orienting the product in landscape. Solar module is recommended to be installed at an optimized tilt angle to maximize the energy output.

Why should you choose Trina Solar products & services?

Vertex 670W, Vertex 550W for example enable commercial and utility-scale solar projects to realize significant system savings. it the best product for us. so we recommend Trina Solar Products and services especially for the African market because our major problem is substandard products.

Do Trina Solar modules need a transformer?

When installed in systems governed by IEC regulations,Trina Solar modules normally do not need to be electronically connected to earthand therefore can be operated together with either galvanically isolated (with transformer) and transformerless inverters.

What is Trina Solar?

Based on the aim of improving the system efficiency and reducing the balance-of-system costs, Trina Solar's research and development team has introduced an innovative design of low-voltage and higher module string power output. Typically, Trina can interconnect 33 Vertex modules into a string.

Do Trina Solar PV modules have bypass diodes?

Trina Solar PV modules are equipped with bypass diodesin the junction box. This minimizes module heating and current losses. Do not try to open the junction box to change the diodes even if they malfunction.
