

## **Turks and Caicos Islands irena electricity storage and renewables**

Does Turks and Caicos have a policy on energy efficiency?

Turks and Caicos has few policies related to energy efficiency and renewable energy. Historically, the territory has not implemented policy mechanisms to aid in the development of clean and energy-efficient technologies.

Could ocean thermal energy help Turks and Caicos meet its peak demand?

Once wave and ocean thermal technologies are proven in the marketplace, ocean energy and ocean thermal energy conversion have potential as well. Abundant wind and solar resources, as well as the potential for other renewable sources could help Turks and Caicos meet or exceed its peak demand of 34.7 MW.

Who owns Turks & Caicos utility limited (TCU)?

Turks & Caicos Utility Limited (TCU) is wholly owned by Fortis TCI and provides electricity to Grand Turk and Salt Cay. In 2010, the government of Turks and Caicos contracted with a consultant to draft recommendations for exploring the use of renewable energy and energy efficiency technologies to create a more sustainable energy framework.

How much does electricity cost in Turks and Caicos?

The 2015 electricity rates in Turks and Caicos are \$0.29 per kilowatt-hour (kWh), slightly below the Caribbean regional average of \$0.33/kWh. Like many island nations, Turks and Caicos is almost 100% reliant on imported fossil fuel, leaving it vulnerable to global oil price fluctuations that have a direct impact on the cost of electricity.

Who owns Turks & Caicos electric grid?

The government-owned Turks and Caicos electric grid was privatized in 2006 through a series of acquisitions to create a vertically integrated structure. Fortis TCI, a wholly owned subsidiary for Fortis Inc., is an international utility holding company that owns and operates generating stations and distribution lines across the islands.

Who regulates the electricity sector in Turks and Caicos?

Four main entities are responsible for governing the electricity sector in Turks and Caicos. The governor grants and revokes licenses, regulates the level and structure of tariffs that electric companies can charge for various customer groups, and approves changes to these regulations.

Renewable energy here is the sum of hydropower, wind, solar, geothermal, modern biomass and wave and tidal energy. Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important energy source in lower-income settings.

Electricity is generated almost exclusively via diesel generators, and solar and renewable energy account for

around 1 MW of installed capacity (approximately 2% of power consumed in the Turks and Caicos based on 2022 figures). Current generation capacity is 86 MW across the country, with a peak demand of 46 MW (2022 data).

National deployment targets should be set for energy storage technologies, the International Renewable Energy Agency (IRENA) Coalition for Action has said. As the United Nations (UN) convenes for COP29 climate talks in Azerbaijan, IRENA has said the global energy transition to low-carbon sources remains "off track".

IRENA Renewable Energy Statistics database Footnotes. Footnotes The power capacity data shown in these tables represents the maximum net generating capacity of power plants and other installations used to produce electricity. For most countries and technologies, the data reflects the capacity installed and connected at the end of the calendar year.

most recent projects in the renewable energy space is an integrated solar plus energy storage (behind-the-meter) pilot program, currently happening at a residential property in Providenciales. This project marks an important step forward in gathering data and valuable insights into the technology and economics of energy storage, which can

**Renewable Energy Infrastructure:** The Legislation encourages the development and deployment of renewable energy technologies, such as solar, wind, and ocean energy, through incentives, subsidies, and regulatory support. It also emphasizes the importance of grid integration and energy storage solutions.

With solar and wind installation breaking new records each year, countries with ambitious plans for these renewable power-generation technologies must consider the best ways to integrate variable renewables onto the grid. Electricity storage is a key option available to manage variability and ensure reliable, round-the-clock supply. Declining costs and improving ...

Providenciales, 06 November 2023 - The Turks and Caicos Islands (TCI) are taking a significant step towards a greener, cleaner, and more sustainable future with the introduction of the groundbreaking Renewable Energy and Resource Planning Bill 2023. After an extensive period of public consultation, the government is unveiling a comprehensive Legislation that is aimed at [...]

The partnership will advance renewable energy in a number of ways: Building a regulatory framework; Support for permitting and planning of renewable energy projects; Assessment of resources, including wind ...
