

Why did Pope Francis build a solar plant in Rome?

Pope Francis' decision to construct a solar plant on the outskirts of Rome is a tangible manifestation of his commitment to sustainability and the fight against climate change. Not only will this initiative provide renewable energy to the Vatican, but it will also establish a standard for other institutions around the world.

Does the Vatican need a solar plant?

The implementation of a solar plant not only improves the Vatican's environmental sustainability, but also offers economic and social benefits. By generating its own energy, the Vatican can save on light. This is especially relevant in a context where the price of light is a constant worry for many.

Does Pope Francis support solar energy?

Solar energy plays an essential role in Pope Francis' strategy to address climate change. Since his 2015 encyclical "Laudato Si'," the Pope has been a firm defender of climate action and repeatedly appealed to the international community to take swifter and more decisive measures. (ZENIT News /Rome,14.08.2024).-

Can the Vatican save on light?

By generating its own energy, the Vatican can save on light. This is especially relevant in a context where the price of light is a constant worry for many. The use of solar energy also improves the State's energy efficiency, enabling a more responsible and sustainable light consumption.

Pope Francis said the Vatican is committed to "contribute to the efforts of all states" to address climate change challenges. The new plant aims to provide 100% of the energy for the Vatican City State. The Vatican's global emissions were less than 0.0001% in 2022. Photo credit: Todor Stoyanov / Shutterstock
