The print on my battery front panel was wrong. It typically come in this order from left to right: RS485 (for inverter), CAN, RS232, RS485 for parallel battery, RS485 for parallel battery. The last 2 are identical. I proposed my battery supplier to integrate this into their documentation. Finally, the Growatt SPH shows the battery in the display.

ARK family offers flexible energy options for single/three phase, hybrid/ac-coupled, and battery-ready solutions for different scenarios, which adopts Cobalt free LiFePO4 chemistry, together with multiple level protection from BMS and inverters to ensure its extreme safety and reliability, excellent performance, and a long lifespan.

Hi, I have the same issue: BMS is shutting down battery around 40% SOC. So I thought the cells are out of balance. So, to debug the issue, I've tried to connect to BMS from a PC, but nothing worked (tried with RS485-USB adapter with SEPLOS BatteryMonitor software).

I've had my Growatt and batteries for a couple of weeks. And I'm on a split tariff, cheap rate is 21:00 - 07:00 weekdays and all day on the weekend, but I'm struggling to work out how to schedule the battery to charge differently on the weekend to during the week as it makes not sense charging overnight on the weekend.
